

Activated Carbon Filter Cartridges

Select high quality activated carbon and through multi processes with 300~500°C carbonization treatment. Make carbon to be porous structure. Under 800~1100°C high temperature activation in order to clear reaction products in the pores. The process improves the absorption ability of the activated carbon filter cartridges.

* CCW-Granular Carbon PP String Wound Filter Cartridges

- The outer layer of PP string blocks the particles out as pre filtration
- The middle layer of granular activated carbon performs great absorption
- The inner layer of PP string is the final filtration to increase quality of filtration and to prevent carbon release
- $(\text{BET}, \text{N}_2) \geq 1000 \text{ m}^2/\text{g}$

Length	Nominal Type: 10, 20, 30, 40 inch High-Flow Large Size: 10, 20 inch
Applications	PCB, Electroplating, Reverse Osmosis Pretreatment, Chemical Processing, General Filtration, Reclaimed Water Treatment
